```
click → dispatchEvent → batchedUpdates → performWork → performWorkOnRoot → renderRoot
                                                                                    ↓
completeWork ← completeWork ← completeUnitOfWork ← performUnitOfWork ← workLoop
                                                         ↓        ↑
updateClassInstance ← updateClassComponent ← beginWork ↲         │
                           ↓                                      │
reconcileChildren ← finishClassComponent ←────────────────────────┘
        ↓                                                          │
        └──────────────────────────────────────────────────────────┘
```

updateClassComponent：创建组件实例，校验shouldComponentUpdate
updateClassInstance：componentWillReceiveProps -》shouldComponentUpdate -》componentWillUpdate-》componentDidUpdate
finishClassComponent：rerender
reconcileChildren：子节点diff，数组遍历diff在reconcileChildrenArray中
